**Project ID :** P0060196/0001 **Draft for public enquiry**  
**ICS :**  
**National Ref :** PNE 83518  
**Title :** Determination of fiber content in samples of fiber reinforced concrete: Inductive method  
**Scope :** This standard is applied to determine the fiber content (Cf) in fiber reinforced concrete (HRF) samples. The proposed method is applicable in HRF in fresh state and in hardened state.

---

The fibers used to reinforce the concrete must contain steel (or another metallic material with a magnetic permeability greater than that of the concrete) in sufficient quantity to generate a variation in inductance ( $\Delta L$ ) when a magnetic field is applied.  
The method is applicable for cubic and cylindrical geometries of fiber reinforced concrete samples.

**Title :** Accessible built environment – Additional design principles to ÖNORM B 1600

---

**Scope :** The provisions of this document are applicable to the construction of accessible buildings and structural facilities. In the case of measures taken on existing buildings and structural facilities, potential deviations from this standard are outlined, with the condition that their accessibility must not be worsened.

This document is to be applied together with ÖNORM B 1600 and describes measures that go beyond the requirements of ÖNORM B 1600. This applies in particular to barrier-free accommodation, cultural, leisure and sports buildings, administrative buildings, service buildings, workplaces, public transport facilities, outdoor areas and urban spaces.

The planning principles previously stated in ÖNORM B 1601 (Accessible health care facilities, assistive housing and workplaces - Planning principles), ÖNORM B 1602 (Accessible educational facilities - Planning principles) and ÖNORM B 1603 (Accessible tourism and leisure facilities - Planning principles) are summarized in the present ÖNORM.

These planning principles are supplemented with regard to those functional requirements of ÖVE/ÖNORM EN 17210 that have not yet been dealt with in ÖNORM B 1600, ÖNORM B 1601, ÖNORM B 1602 and ÖNORM B 1603.

<b>ICS :</b>	91.100.10		
<b>National Ref :</b>	ÖNORM B 3415		
<b>Title :</b>	Planning and execution of dry construction works		
<b>Scope :</b>	This Austrian Standard is to be used for the planning and execution of non-load-bearing systems made of gypsum boards according to ÖNORM B 3410, ÖNORM EN 15283-1, ÖNORM EN 15283-2, and cement-bonded drywall panels based on the ÖNORM EN 12467, which are built on site from generally available components or from components manufactured on site. These are e.g. Stud walls, suspended ceilings, wall and ceiling coverings, attic extensions and coverings of building elements.		

This ÖNORM does not deal with:

- in workshop prefabricated building elements for timber and prefabricated houses according to ÖNORM B 2310 and ÖNORM B 2320 as well as the completion thereof during construction of the building on site
- building elements with structural and/or reinforcing effect
- building elements dealt with by a harmonized European Standard (hEN) or for which a European Technical Assessment (ETA) has been issued or a national technical building approval has been granted.

Title :	Laser - Radiation protection requirements regarding the production of light-effects by means of laser radiation in the presence of an audience or during the presentation of laser equipment		
Scope :	This ÖNORM applies to laser equipment for demonstration, display and exhibition purposes in accordance with ÖVE/ÖNORM EN 60825-1. On the one hand, it distinguishes between applications in which laser radiation is used to generate light effects in front of an audience for the purposes of advertising, entertainment, display or artistic performance. These laser devices are hereinafter referred to as show lasers (demonstration lasers). On the other hand, this ÖNORM also applies when lasers, laser systems or laser devices are demonstrated to an audience in their intended use, regardless of whether they emit in the visible or non-visible spectral range. Class 1 and Class 2 laser devices are exempt from the provisions of this ÖNORM, as they can be considered sufficiently safe and no special protective measures are required.

<b>Title :</b>	Dismantling of buildings as a standard method for demolition		
<b>Scope :</b>	This document describes the measures needed for the planning and execution of the dismantling of buildings and specifies separation principles for the different materials in regard to reuse, recovery or disposal. The dismantling objective is to obtain mono-material mostly free of harmful substances and impurities. If ecologically appropriate, technically possible and not unreasonably cost-intensive, the waste products of the dismantling process shall be reused or recovered. Harmful substances and impurities have to be examined and separated to obtain recyclable mono-fraction demolition materials. This document describes the dismantling in structural and civil engineering including line construction works and paved area.
